

Building a healthy, sustainable future

Britvic's 2019 sustainability highlights

At Britvic we are committed to making a positive difference to the world around us. Our A Healthier Everyday programme is our framework for helping to build a healthier, more sustainable future for stakeholders throughout our value chain. We recognise the urgency of the issues facing our planet and society, including climate change, public health and plastic pollution, and we are committed to playing our part in creating a more sustainable world.

Sourcing

- In 2019 the percentage of direct suppliers linked to us on the ethical supply chain platform, Sedex, grew from 57% to 92%
- We co-hosted the AIM-PROGRESS Supplier Capability Building event in São Paulo to build knowledge around responsible sourcing issues
- We engaged with over 300 of our suppliers to better understand the carbon impacts of the materials we source
- We secured the long-term supply of UK-sourced recycled PET (rPET) through a £5m investment in Esterform's new rPET manufacturing facility

Making

- Our investment in green manufacturing continued this year, as we commissioned a new renewable biomass boiler in Brazil and a combined heat and power plant in GB
- By switching our grid-sourced electricity for GB manufacturing to renewable, our overall market-based scope 1 and 2 carbon emissions intensity reduced by 20%
- The results of our business capability programme allowed us to save nearly 650 tonnes of plastic through making lighter bottles on our new manufacturing lines.

Enjoying

- We are proud to continue to help our consumers enjoy healthier drinks and we surpassed our 2020 calories reduction goal a year early
- We launched a new three-year corporate partnership with Diabetes UK to help those living with type 2 diabetes. Our employees have wholeheartedly supported this, with fundraising activities including head shaving, Tough Mudders, task angels and fancy dress competitions
- Through our brands and customer partnerships, we led engaging recycling activations at sporting events such as the Wimbledon Championships, the NFL and Twickenham rugby to help consumers enjoy their day while raising recycling awareness.
